Cost: \$10 for the book

Favorite quote from the book:
"Everything must align with your primary purpose in life. In other words, why you do what you do should derive from why you exist in the first place and flow from there. Once the answer to those questions is in place, you know, locked into your DNA, true success will follow. What's more, it frees you from all the trappings of the never-ending pursuit of success as the world defines it. You learn to embrace where you are instead of getting caught up in the race toward a position of prominence, or moving through life driven only by the pursuit of treasures or the fear of losing them."
